

# HATCHERY PRODUCTION

February 1963

March 15, 1963

## Chicks Hatched

The number of chicks hatched by commercial hatcheries during February 1963 was 210,162,000, about the same as in February a year ago. Of this number 168,431,000 were broiler chicks and 41,731,000 were egg-type chicks. Production of broiler chicks was about the same as in February last year. Production of egg-type chicks was up 4 percent. The number of eggs in incubators on March 1, 1963, compared with a year earlier indicates that the hatch of chicks (both broiler and egg-type) in March 1963 will be smaller than in March a year ago.

## Poults Hatched

The number of turkey poult hatched in February was larger than a year earlier. The hatch of heavy white breeds was 2,594,000--up 24 percent; other heavy breeds, 4,402,000--up 26 percent; and light breeds, 645,000--up 23 percent. There were 10,964,000 turkey poult (both heavy and light breeds) hatched during the first two months of 1963--14 percent more than during the same period in 1962. The number of turkey eggs in incubators on March 1, 1963, compared with a year earlier indicates that the hatch of heavy breed poult in March will be larger than in March last year. The hatch of light breed poult will be smaller.

## Number of Hatcheries and Egg Capacity Reported January 1, 1963

The number of chick hatcheries operating in the United States has been decreasing rapidly. The number operating in 48 States January 1, 1963 was 2,900 compared with 3,513 on January 1, 1961 and 6,890 on January 1, 1953. Egg capacity has decreased also during the past 10 years but not as much as the decrease in number of hatcheries would suggest. Many smaller hatcheries have gone out of business. Some of those remaining have become larger. Egg capacity of hatcheries in the 48 States operating January 1, 1963 was 493,797,000 eggs, compared with 508,500,000 on January 1, 1961 and 562,237,000 on January 1, 1953. In 1963 hatcheries with a capacity of 100,000 eggs and over had 83 percent of the total egg capacity. In 1961 hatcheries of 100,000 egg capacity and over had 78 percent of the total egg capacity and in 1953 they had 61 percent of the total egg capacity. The largest decreases in number of hatcheries operating and in egg capacity have taken place in the Mid-Atlantic, East

(Continued from Page 1)

North Central and West North Central regions. The poultry industry in these important producing areas has been decreasing steadily since 1955.

The number of chick hatcheries decreased in all regions of the country during the past 2 years. The decreases in number of hatcheries ranged from 7 in the Mountain States to 219 in the West North Central States. Not all regions showed decreases in egg capacity during this period. Increases in egg capacity were reported in the regions that produce most of the commercial broilers--the South Atlantic, East South Central, West South Central, and Pacific Coast regions. The largest increase was in the West South Central States where the increase in egg capacity was 9 million eggs. The largest decrease in egg capacity during the past 2 years was in the West North Central region where capacity decreased by 17 million eggs.

Fewer and larger turkey hatcheries has been the trend during the past 4 years of available statistics. The 551 turkey hatcheries operating as of January 1, 1963 compares with 621 on January 1, 1961 and 682 on January 1, 1959. While the number of turkey hatcheries has decreased, total egg capacity has increased. Egg capacity increased from 49,730,000 eggs on January 1, 1959 to 54,237,000 on January 1, 1963. Egg capacity of the turkey hatcheries on January 1, 1959 was 45,544,000 eggs. On January 1, 1963 turkey hatcheries having egg capacities of 100,000 eggs and over had 74 percent of the total egg capacity of all the turkey hatcheries. On January 1, 1961, this size group had 68 percent of the total egg capacity and on January 1, 1959, 61 percent of the total egg capacity.
